

New for 2008

Gripple T-CLIP

New Gripple T-Clip

- A revolutionary new way to secure a fence
- Erect stock netting in seconds
- Forget knotting or staples at the end post
- No need to remove or cut vertical wires
- Simply 'twist and push'
- Works on 2.00 - 3.25mm / 14-10ga wire
- Ideal for sheep netting and awkward horse mesh

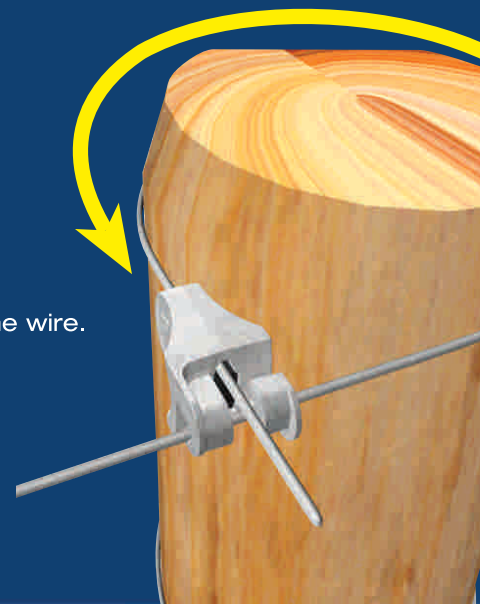

The new Gripple T-Clip is a revolutionary new way to start or terminate a fence. This new product eliminates timely knotting and stapling wires at a strainer post with one fast, simple, 'twist & push' action.

GRIPPLE

A fence is secured in seconds rather than minutes

1. Wrap the netting around the end post.
2. Twist a Gripple Fence Clip onto the top line wire.
3. Then push the tail wire into the channel.
4. Repeat on all wires.
5. Snip the tail wires to finish the job.
6. Tension the fence at a roll join as normal, with the Gripple Tensioning Tool.

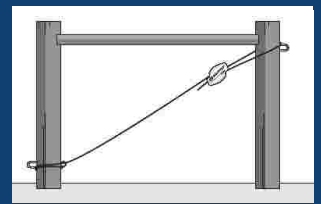

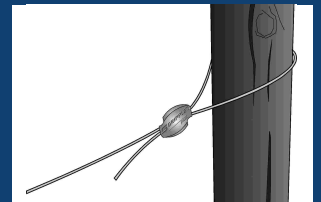

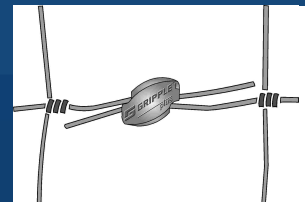

Fencing

Plain Wire Barbed Wire Stock Netting Repairs Tensioning Bracing ...and more

- Join and tension wire in seconds
- No knotting, twisting or bending of awkward wire
- Ideal for fast, economic repairs
- Re-tension easily year after year

Using Gripple significantly reduces the amount of time and labour needed to install and maintain your fence. Unlike using knots and crimps, Gripple allows you not only to join wire, but to **tension wire too**. In addition to using Gripple to install plain wire, barbed wire, electric fence and stock netting, the Gripple system can also be used for fast and economic repairs too.

Post bracing kits are available too. Gripple 'GPAks' come complete with a Gripple unit and a length of wire rope with a pre-ferruled loop at one end, for fast and easy installation. The kit can be installed and tensioned in less than 1 minute.

Starter Pack

Tool Deal

Tool only
